GANGS

OPTION A

OPTION B

Branders are machined out of stainless steel

Option A is the standard clearance slot design.

Option B allows additional holding to compensate for worn top and bottom rails keeping it from falling out of the brander.

All branding dies can be ordered in sharp, narrow, or bold letters.

More stock, for a bumper, can be added at the ends for tapping the plate without damaging the die if desired.

Back shape fit automatic nailer branding machines, faces can be made smaller or larger as desired.
Narrow die is 20% to 33% smaller on the branding side only.
View shown with 20% narrow style and bumpers.
